Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

# SDC Hackathon

# Technical Tools Declaration

**Hosted by Xiamen University Malaysia (XMUM) AI Club**

**Submission Deadline: 25 October 2026**

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

**SDC HACKATHON 2026**
**Technical & Tools Declaration**
Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

## 1. Team & Project Overview

| | |
|---|---|
| **Team Name** | ODDS |
| **Project / Solution Name** | FuturePath AI |
| **Name (Leader)** | Nur Faqiah Binti Mohd Noh |
| **Email & Phone (Leader)** | nurfqeh23@gmail.com @ 011-27639342 |
| **University Affiliation(s)** | Universiti Teknologi Mara (UiTM) |
| **Live Prototype URL** | https://youtu.be/J55reJcBxpc |
| **Code Repository URL (public / access granted to judges)** | https://github.com/njwaliya/sdc-hackathon-odds |

## 2. Architecture & Technology Stack

### 2.1 System Architecture Overview

*Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.*

***[Maximum 200 words]***

The user upload their CV in a web interface hosted on Replit. The interface sends the profile to the matching engine, which reads four data files (roles, trend, SDG map, courses) build from O*NET, the WEF Future of Jobs Report 2025, UN SDG targets and public course listings. The engine calculates an explainable match score for eight future roles, the skills gap, an ordered reskilling pathway, SDG tags and two scenario results (moderate and fast AI adoption), and returns them to the interface with the source and date of each item. No external AI model or API is called. Source code is hosted on GitHub and the prototype is deployed on Replit.

### 2.2 Languages, Frameworks & Libraries

*List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.*

| Name & Version | Purpose in Project | License |
|---|---|---|
| JavaScript | Frontend interaction and functionality | Open standard (ECMAScript) |
| HTML5 and CSS3 | Frontend structure and styling | Open web standards |
| Python [ 3.14.6] | Backend logic and data processing | PSF license |
| Flask-CORS | Lets the web frontend call the Flask backend | MIT |

## 3. APIs & Cloud Services

### 3.1 External APIs

*List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.*

| API & Provider | Purpose in Project | Access Tier (free / paid / sponsor-provided) |
|---|---|---|
| None -- no external API integrated | Career matching uses local CSV datasets and custom scoring logic; no external GenAl, maps, payment or messaging API is currently integrated. | N/A no external API |

### 3.2 Cloud Platforms & Deployment

*List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.*

| Service & Provider | Purpose in Project | Plan / Region |
|---|---|---|
| Replit (Replit, Inc.) | Development environment and hosting of the live prototype | core; Deployment region not verified |
| GitHub (GitHub, Inc.) | Public source-code repository | Free |
| Local CSV Files | Storage for career, skills, trends, and SDG mapping datasets. | Local project storage / Region N/A |

## 4. AI Tools, Models & Datasets

### 4.1 AI Models Used in the Solution

*List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.*

| Model & Version | Source / Provider | Usage (pre-trained / fine-tuned / self-trained) | License / Terms |
|---|---|---|---|
| Custom Weighted Scoring Model (60% Skill Match + 40% Trend) | Developed in-house for the project | Self-developed rule-based scoring model; not pretrained or fine-tuned | Original project code; no separate model license |

### 4.2 Datasets

*List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.*

| Dataset Name | Source / URL | Type (public / private / self-collected / synthetic) | License | Personal Data? (Y/N) |
|---|---|---|---|---|
| O*NET occupational data (e.g.43-3051.00) | https://www.onetonline.org/link/details/43-3051.00 | Public | **CC BY 4.0; role/skill mapping adapted by our team** | N |
| WEF Future of Jobs Report 2025 (skill and role trends) | https://www.weforum.org/publications/the-future-of-jobs-report-2025/ | Public | All rights reserved; used as a cited reference. Team-created trend labels and scores are not WEF-published. | N |

| Dataset Name | Source / URL | Type (public / private / self-collected / synthetic) | License | Personal Data? (Y/N) |
|---|---|---|---|---|
| UN SDG targets | https://sdgs.un.org/goals | Public | UN website terms apply; SDG mapping and reasons written by our team. | N |
| Course listings | Coursera: https://www.coursera.org/specializations/microsoft-365-fundamentals LinkedIn: https://www.linkedin.com/learning/coaching-and-developing-employees-22657884 EDX: https://www.edx.org/learn/social-science/eth-zurich-beyond-systems-thinking-2 https://www.netacad.com/courses/data-analytics-essentials | Public | Provider terms apply; metadata only, no content copied | N |
| Synthetic sample skill profiles | Created by our own team | Synthetic | Team-created | N |

### 4.3 AI-Assisted Development Tools

*Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.*

Did your team use any generative-AI tool to help create code, design, text, or other project material?

✓ Yes ☐ No

If yes, list them below:

| **Tool & Version** | **Used For** | **Extent of Use (minor / moderate / major)** |
|---|---|---|
| Claude (Anthropic) [Sonnet 5.5 medium] | Project planning; drafting proposal text, README,guides and checklists;checking sources and Backend development and integration and bug fixing. | major |
| Microsoft Copilot [GPT-5] | Workflow,task planning and bug fixing. | major |
| Replit AI Assistant | Frontend development, including planning and refining the user interface; project planning and documentation support and bug fixing. | major |
| ChatGpt [Gpt-6] | Frontend development,Backend development, bug fixing and idea integration. | major |
| Google Gemini [gemini 3 model] | Frontend development,Backend development, bug fixing and idea integration. | major |

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

***[Maximum 100 words]***

Team members reviewed AI-generated text, code, and suggestions before using them. Facts and figures were checked against the original sources (O*NET, WEF Future of Jobs Report 2025, UN SDG targets, authoritative sources); claims we could not verify were removed or marked. The product does not generate content, so every role and course shown comes from our own cited data files. Core decisions (persona, scope, SDG track, scoring logic) were made by the team, and each member can explain their own part.

**5. Sponsor-Provided Resources**

*Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.*

Did your project use any official SDC sponsor-provided resource?

✓ Yes ☐ No

If yes, list them below:

| **Sponsor** | **Resource (API / credits / platform / data)** | **How It Was Used in the Project** |
|---|---|---|
| SDC | Platform / Cloud hosting / Cloud credits | Used Replit to develop, run, and host the hackathon prototype including the Flask backend and web frontend. |

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

***[Maximum 100 words]***

| |
|---|
| Replit hosts the live prototype and provides the development environment, so it is needed for the public demo link. It is not essential to the core logic: FuturePath AI is a standard Python and Flask app with CSV data files, so it could run on any web host or locally with small changes. No sponsor-provided GenAI API is used, and the scoring does not depend on any sponsor resource. |

## 6. Security, Privacy & Responsible Use

### 6.1 Data Handling & Privacy

*What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.*

***[Maximum 150 words]***

FuturePath AI does not store personal data. The skills form is processed during the session to produce recommendations and is not saved to a database or sent to any third-party or AI service. The demo uses only synthetic sample profiles; no real CVs or personal data are used. The repository and data files contain public data and no credentials.

### 6.2 Known Limitations & Risks

*Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.*

***[Maximum 150 words]***

FuturePath AI does not use a generative-AI model, so it cannot invent roles or courses: every item comes from cited data files. Main limitations: (1) O*NET describes the US labour market, so role requirements may differ in Malaysia; (2) trend data are published estimates that change, so we show source and date and offer moderate and fast scenarios; (3) the match score is a simple, explainable formula and depends on consistent skill naming; (4) coverage is limited to nine future roles. Mitigations: all output a cite sources, and results support the user's decision rather than make it.

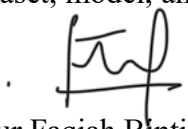

## 7. Compliance & Readiness Checklist

*Tick all boxes that apply before submitting.*

- ✓ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ✓ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ✓ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ✓ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ✓ Any use of official SDC sponsor resources has been declared in Section 5.
- ✓ The prototype described here is accessible to judges through the links provided in Section 1.
- ✓ All fields in this template have been completed within the word limits stated.

**8. Declaration**

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

[Nur Faqiah Binti Mohd Noh]
